

Veridical ⇔ Adaptive Decision making

“Our whole educational system is based on teaching *veridical decision making*....Strategies of actor centered, *adaptive decision making* are simply not taught. Instead they are acquired by each individual idiosyncratically, as a personal cognitive discovery, through trials and errors.”

E. Goldberg (2001) in : “The executive brain; Frontal lobes and the civilized mind”

Adaptive Decision Making requires

- personal expertise,
- professional coordination &
- clear-headedness about roles & responsibilities.
